

**Title:** **The Future of university – A concept based on interaction**

**Topic:** **Future Universities**

**Author/s:** **Sacramento, Tiago (IPS Setúbal)**

My name is Tiago Sacramento, I´m a student from Ips Setubal and this is my idea for the university of the future. In the future, studentS are a part of universities, even more then they are today. The university campus would be iike a mini city. I propose the that universities build supermarkets, hospitals/infirmaries and farms on their campus. Starting on the farms, agronomics students can practice by framing this land and thus be more experienced on a practical aspect of their course. Those vegetables and fruits would be put for sale on the supermarket, where students and teacher could buy them. Also, students who want to make some money could work here. Regarding the hospital, nursing/medical students could work here for extra school credit. I also like to tackle the sustainable aspect. A compositor could be used to reuse vegetable waste from the kitchen in the farm I mentioned before. Also, for recycling I would suggest that the universities place on their campus machines that in return of plastic bottles or cans give the students discounts or money. I would also like to see an app specific for the school. Expanding on the concept of sustainability students should have access to bicycles dispoible from the university facilitating their transportation, because it´s a fact that students tend to live in the surrounding areas. Adopting this idea is meaning that the campus would become bike friendly , a step in the right direction.

This app would allow the automatic pay of tuition fees, calculate the credit score average, takes notes in a way more organized than writing on word.

This is my idea for the future where students are more involved in every activity bettering the environment around them.
